HAPPY VALENTINE'S DAY!!

Did you know? Approximately 150 million Valentine's Day cards are exchanged annually, making Valentine's Day the second most popular card-sending holiday after Christmas?

The Catholic Church recognizes at least three different saints named Valentine or Valentinus, all of whom were martyred. One legend contends that Valentine was a priest who served during the third century in Rome. When Emperor Claudius II decided that single men made better soldiers than those with wives and families, he outlawed marriage for young men. Valentine, realizing the injustice of the decree, defied Claudius and continued to perform marriages for young lovers in secret. When Valentine's actions were discovered, Claudius ordered that he be put to death.

Whatever legend you choose to believe, I hope your day is full of love and CHOCOLATE!! Well, roses & diamonds will work too!! (or shoes!)

I GOT MY FLU SHOT TODAY! DID YOU GET YOURS?

The One Thing You Use All the Time May be Covered with Flu Bacteria.

With peak flu season approaching quickly, you know how important it is to constantly wash your hands and disinfect shared spaces, but there's probably one thing you've been neglecting to disinfect: your cellphone.

Researchers from the University of Arizona found that cellphones carried 10 times more bacteria than most toilet seats. And, what's even more alarming is the fact that cellphones are the perfect vehicle for spreading germs to other people.

That's why it's so important to take the proper steps, like disinfecting your phone daily, using hand sanitizer and practicing good hygiene habits, to keep your phone germ-free this flu season.

How frequently does someone age 65 or older die from the flu?

Every 12  minutes

People 65+ who are living with a chronic condition are more likely to be hospitalized from the flu.

 Heart disease, diabetes, and COPD are among the most common long-term illnesses. Learn how each can elevate your risk for a life-threatening, flu-related complication. People with heart disease, including congestive heart failure and coronary artery disease, have a higher risk for serious complications from the flu. During the 2015-2016 flu season, 41% of adults hospitalized with the flu also had heart disease.

Diabetes can weaken the immune system, making it harder to fight the flu. Having the flu can make it difficult to control blood sugar levels. They can rise from the infection or fall if a person is not eating, causing risk for serious complications.

Chronic lung diseases like COPD and asthma cause airways to swell and become blocked with mucus. Influenza can also increase swelling of airways and lungs, leading to respiratory illnesses.

DON'T BE A VICTIM OF THE FLU!

TRAVEL FROM COPENHAGEN TO OSLO WITH PARTNERS BANK JUNE 23 - JULY 7, 2019
